

# MATHESON

*Specialty Products for the Wine Industry*

## Carbodoser

The Carbodoser uses a simple method to measure the amount of dissolved CO<sub>2</sub> in wine.

This special device measures milligrams per liter of dissolved CO<sub>2</sub>. By agitating the sample the increased pressure displaces some of the wine and the data is converted by temperature and volume to determine the milligrams per liter of dissolved CO<sub>2</sub>.

*Shown with Storage Case*
