There are no specific exposure limits for Nitrogen. Nitrogen is a simple asphyxiant (SA). Oxygen levels should be maintained above 19.5%.

NOTE: All WHMIS required information is included. It is located in appropriate sections based on the ANSI Z400.1-1998 format. This product has been classified in accordance with the hazard criteria of the CPR and the MSDS contains all the information required by the CPR. See Section 16 for Definitions of Terms Used.

3. HAZARD IDENTIFICATION

EMERGENCY OVERVIEW: This is a colorless, non-flammable gas mixture with a solvent-like odor. Inhalation of high concentration of this gas mixture may cause significant, adverse health effects at, due to the hydrocarbon components. Overexposure to high concentrations of this mixture may cause nausea, dizziness, headaches, and collapse, and may be slightly irritating to the mucous membranes. Additionally, releases of this gas mixture may produce oxygen-deficient atmospheres. Individuals in such atmospheres may be asphyxiated. This gas mixture does not present a fire hazard if released. Flame or high temperature impinging on a localized area of the cylinder may cause cylinder to rupture violently or explosively.

SYMPTOMS OF OVER-EXPOSURE BY ROUTE OF EXPOSURE: The most significant route of over-exposure for this product is by inhalation.

INHALATION: Due to the presence of the solvents in this gas mixture, inhalation of high concentrations may result in central nervous system effects, such as dizziness, headaches, incoordination, and drowsiness. In addition, high concentrations of this gas mixture can cause an oxygen-deficient environment, especially if released in a poorly-ventilated area (e.g., an enclosed or confined space). Individuals breathing such an atmosphere may experience symptoms which include headaches, ringing in ears, dizziness, drowsiness, unconsciousness, nausea, vomiting, and depression of all the senses. Under some circumstances of overexposure, death may occur. The effects associated with various levels of oxygen are as follows:

<table>
<thead>
<tr>
<th>OXYGEN CONCENTRATION</th>
<th>OBSERVED EFFECT</th>
</tr>
</thead>
<tbody>
<tr>
<td>12-16% Oxygen:</td>
<td>Breathing and pulse rate increase, muscular coordination slightly disturbed.</td>
</tr>
<tr>
<td>10-14% Oxygen:</td>
<td>Emotional upset, abnormal fatigue, disturbed respiration.</td>
</tr>
<tr>
<td>6-10% Oxygen:</td>
<td>Nausea, vomiting, collapse, or loss of consciousness.</td>
</tr>
<tr>
<td>Below 6%:</td>
<td>Convulsive movements, possible respiratory collapse, and death.</td>
</tr>
</tbody>
</table>

It should be noted that before adverse health effects or suffocation could occur, the lower flammability limits of the components of this gas mixture in air may be exceeded, possibly causing an explosive atmosphere as well as an oxygen-deficient environment.
3. HAZARD IDENTIFICATION (Continued)

CONTACT WITH SKIN or EYES: Prolonged exposure to this gas mixture may result in irritation of the eyes and skin. In addition, contact with rapidly expanding gases (which are released under high pressure) may cause frostbite.

SKIN ABSORPTION: No component of this gas mixture presents a hazard of skin absorption.

HEALTH EFFECTS OR RISKS FROM EXPOSURE: Over-exposure to this gas mixture may cause the following health effects:

ACUTE: This gas mixture may produce adverse health effects such as central nervous system effects, and overexposure or oxygen deficiency. Severe inhalation overexposures can be fatal. This gas mixture may be irritating to the eyes.

CHRONIC: The 1,3-Butadiene component of this gas mixture is a known human carcinogen. Some components of this product are suspect reproductive toxins. Refer to Section 11 (Toxicological Information) of this MSDS for further information. Chronic exposure to oxygen-deficient atmospheres (below 18% oxygen in air) may affect the heart and nervous system. Prolonged exposure to this gas mixture may cause irritation to the eyes and skin.

TARGET ORGANS: ACUTE: Respiratory system, central nervous system. CHRONIC: Cardiovascular system, central nervous system, reproductive system, skin, eyes.

HMIS RATING: HEALTH HAZARD = 1  FLAMMABILITY HAZARD = 0  PHYSICAL HAZARD = 0

Hazard Scale: 0 = Minimal  1 = Slight  2 = Moderate  3 = Serious  4 = Severe

4. FIRST-AID MEASURES

GENERAL INFORMATION: RESCUERS SHOULD NOT ATTEMPT TO RETRIEVE VICTIMS OF EXPOSURE TO THIS GAS MIXTURE WITHOUT ADEQUATE PERSONAL PROTECTIVE EQUIPMENT. At a minimum, Self-Contained Breathing Apparatus and Fire-Retardant clothing must be worn. Adequate fire protection must be provided during rescue situations. Remove to fresh air, as quickly as possible. Only trained personnel should administer supplemental oxygen and/or cardio-pulmonary resuscitation, if necessary. Seek medical attention immediately.

SKIN EXPOSURE: Rinse exposed skin for 15 minutes if any irritation adverse effects occur. If release of this gas mixture has resulted in frostbite, warm affected area slowly. Seek immediate medical attention.

EYE EXPOSURE: If release of this gas mixture has affected the eyes, seek immediate medical attention.

MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE: Pre-existing acute or chronic respiratory conditions may be aggravated by overexposure to this gas mixture.

RECOMMENDATIONS TO PHYSICIANS: Administer oxygen, treat symptoms and eliminate exposure.

5. FIRE-FIGHTING MEASURES

FLASH POINT: Not applicable.

AUTOIGNITION TEMPERATURE: Not applicable.

FLAMMABLE LIMITS (in air by volume, %): Not applicable.

Lower (LEL): Not applicable.  Upper (UEL): Not applicable.

FIRE EXTINGUISHING MATERIALS: Use fire extinguishing material appropriate for surrounding materials that are involved in fire. Use water spray to cool fire-exposed cylinders.

UNUSUAL FIRE AND EXPLOSION HAZARD: DANGER! Fire-exposed cylinders may rupture explosively.

EXPLOSION SENSITIVITY TO MECHANICAL IMPACT: Not sensitive.

EXPLOSION SENSITIVITY TO STATIC DISCHARGE: Not sensitive.

SPECIAL FIRE-FIGHTING PROCEDURES: Evacuate all personnel from danger area. Immediately cool cylinders with water spray from maximum distance. Incipient fire responders should wear eye protection. Structural fire fighters must wear Self-Contained Breathing Apparatus and full protective equipment.
5. FIRE-FIGHTING MEASURES (Continued)

SPECIAL FIRE-FIGHTING PROCEDURES (continued): Evacuate all personnel from danger area. Immediately cool cylinders with water spray from maximum distance. Incipient fire responders should wear eye protection. Structural fire fighters must wear Self-Contained Breathing Apparatus and full protective equipment. When cool, move cylinders from fire area if this can be done without risk to firefighters. Other information for pre-planning can be found in the American Petroleum Institute Publications 2510 and 1510A, and the North American Emergency Response Guidebook (Guide Number 126).

6. ACCIDENTAL RELEASE MEASURES

LEAK RESPONSE: Evacuate immediate area. Uncontrolled releases should be responded to by trained personnel using pre-planned procedures. Proper protective equipment, including fire protection non-sparking tools. Call CHEMTREC (1-800-424-9300) for emergency assistance. Or if in Canada, call CANUTEC (613-996-6666).

Attempt to close the main source valve prior to entering the area. If this does not stop the release (or if it is not possible to reach the valve), allow the gas to release in-place or remove it to a safe area and allow the gas to be released there. Protect personnel attempting to shut-off with water spray. Monitor the surrounding area for the level of Oxygen. The atmosphere must have at least 19.5 percent Oxygen before non-emergency personnel can be allowed in the area without Self-Contained Breathing Apparatus.

7. HANDLING and USE

WORK PRACTICES AND HYGIENE PRACTICES

Do not eat or drink while handling chemicals.

Be aware of all potential exposure symptoms; exposures to a fatal oxygen-deficient atmosphere could occur without any significant warning symptoms.

All work operations should be monitored in such a way that emergency personnel can be immediately contacted in the event of a release.

Workers who handle this gas mixture should wear protective clothing, as listed in Section 8 (Exposure Controls and Personal Protection).

If ventilation controls are not adequate to keep exposure limits of components below levels below those listed in Section 2, Composition and Information on Ingredients and provide sufficient oxygen content, proper respiratory protection equipment should be provided and workers using such equipment should be carefully trained in its operation and limitations.

Precautions must always be taken to prevent suck-back of foreign materials into the cylinder by using a check-valve, or vacuum break, since suck-back may cause dangerous pressure changes within the cylinder.

Due to the presence of 1,3-Butadiene, requirements of 29 CFR 1910.1051 (The OSHA Occupational Exposure Standard to 1,3-Butadiene, which includes requirements for employee monitoring, regulated areas, engineering controls and work practices) should be consulted when handling this gas mixture.

STORAGE AND HANDLING PRACTICES:

Cylinders should be stored upright and be firmly secured to prevent falling or being knocked-over. Cylinders can be stored in the open, but in such cases, should be protected against extremes of weather and from the dampness of the ground to prevent rusting. Cylinders should be stored in dry, well-ventilated areas away from sources of heat or ignition. Do not allow the area where cylinders are stored to exceed 52°C (125°F).

SPECIAL PRECAUTIONS FOR HANDLING GAS CYLINDERS: Compressed gases can present significant safety hazards. The following rules are applicable to work situations in which cylinders are being used.

Before Use: Move cylinders with a suitable hand-truck. Do not drag, slide or roll cylinders. Do not drop cylinders or permit them to strike each other. Secure cylinders firmly. Leave the valve protection cap (where provided) in-place until cylinder is ready for use.

During Use: Use designated CGA fittings and other support equipment. Do not use adapters. Do not use oils or grease on gas-handling fittings or equipment. Immediately contact the supplier if there are any difficulties associated with operating the cylinder valve. Never insert an object (e.g wrench, screwdriver, pry bar, etc.) into valve cap openings. Doing so may damage the valve, causing a leak to occur. Use an adjustable strap wrench to remove over-tight or rusted caps. Never strike an arc, on a compressed gas cylinder or make a cylinder part of and electric circuit.
7. HANDLING and USE (Continued)

SPECIAL PRECAUTIONS FOR HANDLING GAS CYLINDERS (continued):

After Use: Close main cylinder valve. Replace valve protection cap. Close valve after each use and when empty. Mark empty cylinders “EMPTY”.

PROTECTIVE PRACTICES DURING MAINTENANCE OF CONTAMINATED EQUIPMENT: Refer to current CGA Guidelines for information on protective practices during maintenance of contaminated equipment.

8. EXPOSURE CONTROLS - PERSONAL PROTECTION

VENTILATION AND ENGINEERING CONTROLS: Use with adequate ventilation to ensure compliance with exposure limits described in Section 2 (Composition and Information on Ingredients). Local exhaust ventilation is preferred, because it prevents dispersion of this gas mixture into the work place by eliminating it at its source. If appropriate, install automatic monitoring equipment to detect the level of Oxygen.

RESPIRATORY PROTECTION: Maintain the Oxygen level above 19.5% in the workplace. If necessary, use only respiratory protection authorized in the U.S. Federal OSHA Respiratory Protection Standard (29 CFR 1910.134), or equivalent U.S. State standards and Canadian CSA Standard Z94.4-93. Oxygen levels below 19.5% are considered IDLH by OSHA. In such atmospheres, use of a full-facepiece pressure/demand SCBA or a full facepiece, supplied air respirator with auxiliary self-contained air supply is required under OSHA’s Respiratory Protection Standard (1910.134-1998). The following are NIOSH recommendations for 1,3-Butadiene concentrations in air and are provided for further information:

<table>
<thead>
<tr>
<th>1,3-BUTADIENE CONCENTRATION</th>
<th>RESPIRATORY EQUIPMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>Any Detectable Concentration:</td>
<td>Positive pressure, full facepiece Self-Contained Breathing Apparatus (SCBA) or positive pressure, full facepiece Supplied Air Respirator (SAR) with an auxiliary positive pressure SCBA.</td>
</tr>
<tr>
<td>Escape:</td>
<td>Any air-purifying, full facepiece respirator (gas mask) with an appropriate canister; Escape-type SCBA should be used.</td>
</tr>
</tbody>
</table>

EYE PROTECTION: Splash goggles or safety glasses. If necessary, refer to U.S. OSHA 29 CFR 1910.133, or appropriate Canadian Standards.

BODY PROTECTION: Use body protection appropriate for task. Transfer of large quantities under pressure may require protective equipment appropriate to the task.

9. PHYSICAL and CHEMICAL PROPERTIES

The following information is pertinent for Nitrogen, the main component of this gas mixture:

<table>
<thead>
<tr>
<th>PROPERTIES</th>
<th>INFORMATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>VAPOUR DENSITY</td>
<td>1.145 kg/m³ (0.0715 lb/ft³)</td>
</tr>
<tr>
<td>SPECIFIC GRAVITY (air = 1)</td>
<td>0.967</td>
</tr>
<tr>
<td>SOLUBILITY IN WATER</td>
<td>1.49% (v/v)</td>
</tr>
<tr>
<td>EXPANSION RATIO</td>
<td>Not applicable.</td>
</tr>
<tr>
<td>ODOR THRESHOLD</td>
<td>Not applicable.</td>
</tr>
<tr>
<td>COEFFICIENT WATER/OIL DISTRIBUTION</td>
<td>Not applicable.</td>
</tr>
</tbody>
</table>

The following information is pertinent to this product:

APPEARANCE, ODOR AND COLOR: This gas mixture is colorless and has solvent-like odor due to the presence of all the hydrocarbon solvent components in this product.

HOW TO DETECT THIS SUBSTANCE (warning properties): There are no distinct warning properties of this gas mixture. In terms of leak detection, fittings and joints can be painted with a soap solution to detect leaks, which will be indicated by a bubble formation.

10. STABILITY and REACTIVITY

STABILITY: Stable at standard temperatures and pressures.

DECOMPOSITION PRODUCTS: If involved in a fire, the components of this gas mixture will generate carbon monoxide, carbon dioxide, water, oxides of nitrogen and various hydrocarbons.
MATERIALS WITH WHICH SUBSTANCE IS INCOMPATIBLE: This gas mixture is incompatible with strong oxidizers (i.e., chlorine, bromine pentafluoride, oxygen, oxygen difluoride, and nitrogen trifluoride), and strong reducing materials. Due to the very small concentration levels of components other than nitrogen, the incompatibilities of individual components is not expected to be significant.

HAZARDOUS POLYMERIZATION: Will not occur.

CONDITIONS TO AVOID: Contact with incompatible materials, heat, spark or flame. Cylinders exposed to high temperatures or direct flame can rupture or burst.

11. TOXICOLOGICAL INFORMATION

TOXICITY DATA: The main component, Nitrogen is a simple asphyxiant (SA), which acts to displace oxygen in the environment. No toxicity data are applicable. Due to the very small percentage of all other components of this gas mixture no toxicity data for those components is given. Animal testing on the solvent components of this gas mixture have produced central nervous system effects. These compounds are also considered to be weak to moderate sensitizers of the cardiac system, producing changes in heart function, based on animal tests.

SUSPECTED CANCER AGENT: The components of this gas mixture are listed by agencies tracking carcinogenic potential as follows:

1,3-BUTADIENE: ACGIH TLV-A2 (Suspected Human Carcinogen); EPA-B2 (Probable Human Carcinogen-Sufficient Evidence from Animal Studies, Inadequate Data from Evidence or No Data from Epidemiologic Studies); EPA-CaH (Carcinogenic to Humans); IARC-2A (Probably Carcinogenic to Humans); MAK-1 (Substances That Cause Cancer in Man and Which Can be Assumed to Make a Significant Contribution to Cancer Risk), NIOSH-Ca (Potential Occupational Carcinogen with no Further Classification), NTP-K (Known Human Carcinogen)

The remaining components are not found on the following lists: FEDERAL OSHA Z LIST, IARC, NTP, CAL/OSHA, and therefore is not considered to be, nor suspected to be a cancer-causing agent by these agencies.

IRRITANCY OF PRODUCT: Prolonged exposure to this gas mixture may be irritating to the skin and eyes.

SENSITIZATION TO THE PRODUCT: The components of this product are not known to be skin or respiratory sensitizers. The Isobutane and n-Butane components of this gas mixture have caused weak heart sensitization in animal tests.

REPRODUCTIVE TOXICITY INFORMATION: Listed below is information concerning the effects of the components of this gas mixture on the human reproductive system.

Mutagenicity: Despite their limitations, some human studies have shown mutagenic effects in blood cells of persons occupationally exposed to 1,3-Butadiene. 1,3-Butadiene and its metabolites have exhibited mutagenicity in bacterial test system. Animal information has clearly indicated that 1,3-Butadiene is mutagenic to both somatic and germ cells. Metabolite 1,2,3,4-diepoxybutane has induced dose-related sister-chromatid exchanges in cultured Chinese hamster ovary cells. 1,3-Butadiene induced micronuclei and sister chromatid exchanges in the bone-marrow cells of mice, but not of rats treated in vivo. Several conclusive animal studies have shown that 1,3-Butadiene is mutagenic to sperm.

Embryotoxicity: The components of this gas mixture are not reported to cause embryotoxic effects in humans. Reduced body weight has been observed in studies on mice embryos involving 1,3-Butadiene in the absence of maternal toxicity.

Teratogenicity: The components of this gas mixture are not reported to cause teratogenic effects in humans. Pregnant rats were exposed to 200, 1000, or 8000 ppm the 1,3-Butadiene component on days 6-15 of gestation. Dose-related maternal and fetal toxicity were observed. Offspring of rats exposed at 8000 ppm had increased numbers of major skeletal abnormalities.

Reproductive Toxicity: The components of this gas mixture are not reported to cause reproductive toxicity effects in humans. In studies involving the 1,3-Butadiene component, no reproductive effects nor other significant toxic effects were observed in two inhalation studies using rats (1000-8000 ppm; 6 hours/day for 5 days/week over 13 weeks) or rats and guinea pigs (600-6700 ppm daily for 3 months). In the long-term carcinogenicity studies, there were increased frequencies of uterine and testicular cancers in mice. Non-cancerous atrophy of the ovaries and testes also occurred in mice.

BIOLOGICAL EXPOSURE INDICES (BEIs): There are currently no Biological Exposure Indices (BEIs) determined for components of this gas mixture.
12. ECOLOGICAL INFORMATION

ENVIRONMENTAL STABILITY: This gas mixture will be dissipated rapidly in well-ventilated areas.

EFFECT OF MATERIAL ON PLANTS or ANIMALS: Any adverse effect on animals would be related to oxygen deficient environments.

EFFECT OF CHEMICAL ON AQUATIC LIFE: No an adverse effect from this gas mixture on aquatic life is expected.

13. DISPOSAL CONSIDERATIONS

PREPARING WASTES FOR DISPOSAL: Waste disposal must be in accordance with appropriate U.S. Federal, State, and local regulations and regulations of Canada and its provinces. Return cylinders with any residual product to Matheson Tri-Gas. Do not dispose of locally.

14. TRANSPORTATION INFORMATION

THIS GAS MIXTURE IS HAZARDOUS AS DEFINED BY 49 CFR 172.101 BY THE U.S. DEPARTMENT OF TRANSPORTATION.

PROPER SHIPPING NAME: Compressed gases, n.o.s. (Nitrogen, mixture of hydrocarbons)

HAZARD CLASS NUMBER and DESCRIPTION: 2.2 (Non-Flammable Gas)

UN IDENTIFICATION NUMBER: UN 1956

PACKING GROUP: Not applicable.

D.O.T HAZARD LABEL: Non-Flammable Gas

NORTH AMERICAN EMERGENCY RESPONSE GUIDEBOOK NUMBER (2004): 126

MARINE POLLUTANT: The components of this gas mixture are not classified by the DOT as a Marine Pollutants (as defined by 49 CFR 172.101, Appendix B).

SPECIAL SHIPPING INFORMATION: Cylinders should be transported in a secure position, in a well-ventilated vehicle. The transportation of compressed gas cylinders in automobiles or in closed-body vehicles present serious safety hazards and should be discouraged.

NOTE: Shipment of compressed gas cylinders which have not been filled with the owner’s consent is a violation of Federal law [49 CFR, Part 173.301 (b)].

TRANSPORT CANADA TRANSPORTATION OF DANGEROUS GOODS REGULATIONS: This gas mixture is considered as dangerous goods, per regulations of Transport Canada.

PROPER SHIPPING NAME: Compressed gases, n.o.s. (Nitrogen, mixture of hydrocarbons)

HAZARD CLASS NUMBER and DESCRIPTION: 2.2 (Non-Flammable Gas)

UN IDENTIFICATION NUMBER: UN 1956

PACKING GROUP: Not Applicable

HAZARD LABEL: Class 2.2 (Non-Flammable Gas)

SPECIAL PROVISIONS: None

EXPLOSIVE LIMIT AND LIMITED QUANTITY INDEX: 0.12

ERAP INDEX: None

PASSENGER CARRYING SHIP INDEX: None

PASSENGER CARRYING ROAD VEHICLE OR PASSENGER CARRYING RAILWAY VEHICLE INDEX: 75

NORTH AMERICAN EMERGENCY RESPONSE GUIDEBOOK NUMBER (2004): 126

NOTE: Shipment of compressed gas cylinders via Public Passenger Road Vehicle is a violation of Canadian law (Transport Canada Transportation of Dangerous Goods Act, 1992).
## 15. REGULATORY INFORMATION

### ADDITIONAL U.S. REGULATIONS:

**U.S. SARA REPORTING REQUIREMENTS:** The components of this gas mixture are subject to the reporting requirements of Sections 302, 304 and 313 of Title III of the Superfund Amendments and Reauthorization Act, as follows:

<table>
<thead>
<tr>
<th>CHEMICAL NAME</th>
<th>SARA 302 (40 CFR 355, Appendix A)</th>
<th>SARA 304 (40 CFR Table 302.4)</th>
<th>SARA 313 (40 CFR 372.65)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1,3-Butadiene</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**U.S. SARA THRESHOLD PLANNING QUANTITY:** There are no specific Threshold Planning Quantities for the components of this product. The default Federal MSDS submission and inventory requirement filing threshold of 10,000 lbs (4,540 kg) therefore applies, per 40 CFR 370.20.

**U.S. SARA HAZARD CATEGORIES (SECTION 311/312, 40 CFR 370-21):** ACUTE: Yes; CHRONIC: Yes; FIRE: No; REACTIVE: No; SUDDEN RELEASE: Yes

**U.S. TSCA INVENTORY STATUS:** Components of this product are listed on the TSCA Inventory.

**U.S. CERCLA REPORTABLE QUANTITY (RQ):** 1,3-Butadiene = 10 lb (4.5 kg);

**OTHER U.S. FEDERAL REGULATIONS:** Butane, 1-Butene, trans-2-Butene, cis-2-Butene, trans-2-Butene, Isobutane and Isobutylene are subject to the reporting requirements of Section 112(r) of the Clean Air Act. The threshold quantity for each of these gases is 10,000 lbs (4,540 kg). Butane, 1-Butene, 1,3-Butadiene, cis-2-Butene, trans-2-Butene, Isobutane, and Isobutylene are listed as Regulated Substances in quantities of 10,000 lbs (4,540 kg) or greater, per 40 CFR, Part 68 of the Risk Management for Chemical Accidental Release. Any process that involves a flammable gas on-site, in one location, in quantities of 10,000 lbs (4,540 kg) or greater has requirements under the Process Safety Management of Highly Hazardous Chemicals (29 CFR 1910.119), unless the gas is used as a fuel.

Due to the presence of 1,3-Butadiene, requirements of 29 CFR 1910.1051 and 29 CFR 1910.19(1) should be consulted when handling this gas mixture.

**CALIFORNIA SAFE DRINKING WATER AND TOXIC ENFORCEMENT ACT (PROPOSITION 65):** The 1,3-Butadiene component of this gas mixture is on the California Proposition Lists as a compound that can cause reproductive toxicity and cancer. WARNING! This product contains compound known to the State of California to cause cancer or reproductive harm.

**LABELING:** Cylinders of this gas mixture should be labeled for precautionary information per the guidelines of the CGA. Refer to the CGA for further information.

### ADDITIONAL CANADIAN REGULATIONS:

**CANADIAN DSL/NDSL INVENTORY STATUS:** The components of this product are listed on the DSL Inventory.

**OTHER CANADIAN REGULATIONS:** Not applicable.

**CANADIAN ENVIRONMENTAL PROTECTION ACT (CEPA) PRIORITIES SUBSTANCES LISTS:** The components of this product are not on the CEPA Priorities Substances Lists.

**ADDITIONAL CANADIAN. REGULATIONS:**

**CANADIAN WHMIS SYMBOLS:** This gas mixture would be categorized as a Controlled Product, Hazard Class: A (Compressed Gas) and Class D2B: (Other Toxic Effects). The following symbol is required for WHMIS compliance for this gas mixture. The following symbols are required for WHMIS compliance for this gas mixture.
C4 HYDROCARBON MIXTURE IN NITROGEN MSDS

DEFINITIONS OF TERMS

A large number of abbreviations and acronyms appear on a MSDS. Some of these which are commonly used include the following:

CAS #: This is the Chemical Abstract Service Number that uniquely identifies each constituent.

EXPOSURE LIMITS IN AIR:

CEILING LEVEL: The concentration that shall not be exceeded during any part of the working exposure.

DFG MAK Pregnancy Risk Group Classification: Group A: A risk of damage to the developing embryo or fetus has been unequivocally demonstrated. Exposure of pregnant women can lead to damage of the developing organism, even when MAK and BAT (Biological Tolerance Value for Working Materials) values are observed. Group B: Currently available information indicates a risk of damage to the developing embryo or fetus must be considered to be probable. Damage to the developing organism cannot be excluded when pregnant women are exposed, even when MAK and BAT values are observed. Group C: There is no reason to fear a risk of damage to the developing embryo or fetus when MAK and BAT values are observed. Group D: Classification in one of the groups A-C is not yet possible because, although the data available may indicate a trend, they are not sufficient for final evaluation.

LOQ: Limit of Quantitation.

MAK: Federal Republic of Germany Maximum Concentration Values in the workplace.

NE: Not Established. When no exposure guidelines are established, an entry of NE is made for reference.

NIC: Notice of Intended Change.

NIOSH CEILING: The exposure that shall not be exceeded during any part of the workday. If instantaneous monitoring is not feasible, the exposure that shall not be exceeded during any part of the working exposure.

NIOSH RELs: NIOSH’s Recommended Exposure Limits.

PEL-Permissible Exposure Limit: OSHA’s Permissible Exposure Limits. This exposure value means exactly the same as a TLV, except that it is enforceable by OSHA. The OSHA Permissible Exposure Limits are based in the 1989 PELs and the June, 1993 Air Contaminants Rule (Federal Register: 58: 35338-35351 and 58: 50070). Both the current PELs and the vacated PELs are indicated.

SKIN: Used when there is a danger of cutaneous absorption.

STEL-Short Term Exposure Limit: Short Term Exposure Limit, usually a 15-minute time-weighted average (TWA) exposure that should not be exceeded at any time during a workday, even if the 8-hr TWA is within the TLV-TWA, PEL-TWA or REL-TWA.

TLV-Threshold Limit Value: An airborne concentration of a substance that represents conditions under which it is generally believed that nearly all workers may be repeatedly exposed without adverse effect. The duration must be considered, including the 8-hour.

TWA-Time Weighted Average: Time Weighted Average exposure concentration for a conventional 8-hr (TLV, PEL) or up to a 10-hr (REL) workday and a 40-hr workweek.

EXPOSURE LIMITS IN AIR (continued):

IDLH-Immediately Dangerous to Life and Health: This level represents a concentration from which one can escape within 30-minutes without suffering escape-preventing or permanent injury.

HAZARDOUS MATERIALS IDENTIFICATION SYSTEM

HAZARD RATINGS:

This rating system was developed by the National Paint and Coating Association and has been adopted by industry to identify the degree of chemical hazards.

HEALTH HAZARD:

HAZARDOUS MATERIALS IDENTIFICATION SYSTEM

16. OTHER INFORMATION

CREATION DATE: November 24, 2004

REVISION DATE: New

MIXTURES: When two or more gases or liquefied gases are mixed, their hazardous properties may combine to create additional, unexpected hazards. Obtain and evaluate the safety information for each component before you use the mixture. Consult an Industrial Hygienist or other trained person when you make your safety evaluation of the end product. Remember, gases and liquids have properties which can cause serious injury or death.

Further information can be found in the following pamphlets published by: Compressed Gas Association Inc. (CGA), 1725 Jefferson Davis Highway, Suite 1004, Arlington, VA 22202-4102. Telephone: (703) 412-0900.

HAZARDOUS MATERIALS IDENTIFICATION SYSTEM
HAZARD RATINGS (continued):

FLAMMABILITY HAZARD:

0 (Minimal Hazard-Materials that will not burn in air when exposure to a 
temperature of 815.5°C [1500°F] for a period of 5 minutes.); 1 (Slight 
Hazard-Materials that must be pre-heated before ignition can occur. 
Material require considerable pre-heating, under all ambient 
temperature conditions before ignition and combustion can occur, 
including: Materials that will burn in air when exposed to a temperature 
of 515.5°C (1000°F) for a period of 5 minutes or less; Liquids, solids 
and aerosols with a flash point above 93.3°C [200°F]; OSHA Class IIIIB; or; Most ordinary combustible materials [e.g. wood, 
paper, etc.]; 2 (Moderate Hazard-Materials that must be moderately 
heated or exposed to relatively high ambient temperatures before 
ignition can occur. Materials in this degree would not, under normal 
conditions, form hazardous atmospheres in air, but under high ambient 
temperatures or moderate heating may release vapor in sufficient 
quantities to produce hazardous atmospheres in air. Including: Liquids 
having a flash-point at or above 37.8°C [100°F]. Solid materials in the 
form of coarse dusts that may burn rapidly but that generally do not 
form explosive atmospheres; Solid materials in a fibrous or shredded 
form that may burn rapidly and create fire flash hazards [e.g. cotton, 
sisal, hemp; Solids and semisolids that readily give off flammable 
vapors.]; 3 (Serious Hazard- Liquids and solids that can be ignited 
under almost all ambient temperature conditions. Materials in this 
degree: flammable atmospheres when mixed with air under all ambient 
temperatures, or, unaffected by ambient temperature, are 
readily ignited under almost all conditions, including: Liquids having a 
flash point below 22.8°C [73°F] and having a boiling point at or above 
38°C [100°F] and below 37.8°C [100°F] [e.g. OSHA Class IB and IC]; Materials that on account of their physical form or environmental 
conditions can form explosive mixtures with air and are readily 
dispersed in air [e.g., dusts of combustible solids, mists or droplets of 
flammable liquids]; Materials that burn extremely rapidly, usually by 
reason of self-contained oxygen [e.g. dry nitrocellulose and many 
organic peroxides]; 4 (Severe Hazard-Materials that will rapidly or 
completely vaporize at atmospheric pressure and normal ambient 
temperature or that are readily dispersed in air, and which will burn 
readily, including: Flammable gases; Flammable cryogenic materials;
Any liquid or gaseous material that is liquid while under pressure and 
has a flash point below 22.8°C [73°F] and a boiling point below 37.8°C 
[100°F] [e.g. OSHA Class IA]; Material that ignite spontaneously when 
exposed to air at a temperature of 54.4°C [130°F] or below [e.g. 
pyrophoric].

PHYSICAL HAZARD:

0 (Water Reactivity: Materials that do not react with water. Organic 
 Peroxides: Materials that are normally stable, even under fire 
conditions and will not react with water. Explosives: Substances that 
are Non-Explosive. Unstable Compressed Gases: No Rating. 
Pyrophorics: No Rating. Oxidizers: No “O” rating allowed. Unstable 
Reactives: Substances that will not polymerize, decompose, condense 
or self-react.); 1 (Water Reactivity: Materials that change or decompose 
upon exposure to moisture. Organic Peroxides: Materials that are 
normally stable, but can become unstable at high temperatures and 
pressures. These materials may react with water, but will not release 
energy. Explosives: Division 1.5 & 1.6 substances that are very 
insensitive explosives or that do not have a mass explosion hazard. 
Unstable Reactives: Materials that may decompose, condense or self-react, but only under conditions of high temperature and/or pressure and have little or no potential to cause significant heat generation or explosive hazard. 

HAZARDOUS MATERIALS IDENTIFICATION SYSTEM
HAZARD RATINGS (continued):

PHYSICAL HAZARD (continued):

2 (Water Reactivity: Materials that may react violently with water. 
Organic Peroxides: Materials that, in themselves, are normally 
unstable and will readily undergo violent chemical change, but will not 
detonate. These materials may also react violently with water. 
Explosives: Division 1.4 – Explosive substances where the explosive 
effect are largely confined to the package and no projection of 
flammable contents of appreciable size range are expected. Fire 
flame must not cause virtually instantaneous explosion of almost all 
commodities of the package. Compressed Gases: Pressurized and meet 
OSHA definition but < 514.7 psi absolute at 21.1°C [70°F] [500 psig]. 
Pyrophorics: No Rating. Oxidizers: Packing Group II; Solids: any 
material that, either in concentration tested, exhibits a mean burning 
time of less than or equal to the mean burning time of a 2.3 potassium 
perchlorate/cellulose mixture. Unstable Reactives: Substances that may 
form explosive reactions with water. Organic Peroxides: Materials 
that are capable of detonation or explosive reaction, but require a 
strong initiating source, or must be heated under confinement before 
initiation; or materials that react explosively with water. Explosives: 
Division 1.2 – Explosive substances that have a fire hazard and either 
a minor blast hazard or a minor projection hazard or both, but do not 
have a mass explosion hazard. Compressed Gases: Pressure > 
514.7 psi absolute at 21.1°C [70°F] [500 psig]. Pyrophorics: No Rating. 
Oxidizers: Packing Group I; Solids: any material that, either 
concentration tested, exhibits a mean burning time less than or 
equal to the pressure rise time of a 1:1 perchloric acid (50%)/cellulose mixture. 
Liquids: Any material that spontaneously ignites when mixed with cellulose in a 
1:1 ratio, or which exhibits a mean pressure rise time less than the 
mean pressure rise time of a 1:1 perchloric acid (50%)/cellulose mixture. 
Unstable Reactives: Substances that may polymerize, decompose, 
condense or self-react at ambient temperature and/or pressure and 
have a moderate potential to cause significant heat generation or 
explosion.); 4 (Water Reactivity: Materials that react explosively with 
water without requiring heat or confinement. Organic Peroxides: 
Materials that are readily capable of detonation or explosive 
decomposition at normal temperature and pressures. Explosives: 
Division 1.1 & 1.2-explosive substances that have a mass explosion 
more than one that affects almost the entire load instantly. Compressed Gases: No 
Rating. Pyrophorics: Add to the definition of Flammability “4”.

NATIONAL FIRE PROTECTION ASSOCIATION HAZARD 
RATINGS:

HEALTH HAZARD: 0 (material that on exposure under fire conditions 
would offer no hazard beyond that of ordinary combustible materials); 1 
(materials that on exposure under fire conditions could cause irritation 
or minor residual injury); 2 (materials that on intense or continued 
exposure under fire conditions could cause temporary incapacitation 
or possible residual injury); 3 (materials that can on short exposure could 
cause serious temporary or residual injury); 4 (materials that under 
very short exposure could cause death or major residual injury).

FLAMMABILITY HAZARD: 0 Materials that will not burn under 
typical fire conditions, including intrinsically noncombustible materials 
such as concrete, stone, (65%) cellulose mixture and the criteria for 
Packing Group I and II are not met. Unstable Reactives: 
Substances that may decompose, condense or self-react, but only 
der under conditions of high temperature and/or pressure and have little or 
no potential to cause significant heat generation or explosive hazard. 
Substances that readily undergo hazardous polymerization in the 
absence of inhibitors;
DEFINITIONS OF TERMS (Continued)

NATIONAL FIRE PROTECTION ASSOCIATION HAZARD RATINGS (continued):
FLAMMABILITY HAZARD (continued): 3 Liquids and solids that can be ignited under almost all ambient temperature conditions. Materials in this degree produce hazardous atmospheres with air under almost all ambient temperatures or, though unaffected by ambient temperatures, are readily ignited under almost all conditions. 4 Materials that will rapidly or completely vaporize at atmospheric pressure and normal ambient temperature or that are readily dispersed in air and will burn readily.

INSTABILITY HAZARD: 0 Materials that in themselves are normally stable, even under fire conditions. 1 Materials that in themselves are normally stable, but that can become unstable at elevated temperatures and pressures. 2 Materials that readily undergo violent chemical change at elevated temperatures and pressures. 3 Materials that in themselves are capable of detonation or explosive decomposition or explosive reaction, but that require a strong initiating source or that must be heated under confinement before initiation. 4 Materials that in themselves are readily capable of detonation or explosive decomposition or explosive reaction at normal temperatures and pressures.

FLAMMABILITY LIMITS IN AIR: Much of the information related to fire and explosion is derived from the National Fire Protection Association (NFPA). Flash Point = Minimum temperature at which a liquid gives off sufficient vapors to form an ignitable mixture with air. Autoignition Temperature: The minimum temperature required to initiate combustion in air with no other source of ignition. LEL = the lowest percent of vapor in air, by volume, that will explode or ignite in the presence of an ignition source. UEL = the highest percent of vapor in air, by volume, that will explode or ignite in the presence of an ignition source.

TOXICOLOGICAL INFORMATION:
Human and Animal Toxicology: Possible health hazards as derived from human data, animal studies, or from the results of studies with similar compounds are presented. Definitions of some terms used in this section are: LD₅₀ - Lethal Dose (solids & liquids) which kills 50% of the exposed animals; LC₅₀ - Lethal Concentration (gases) which kills 50% of the exposed animals; ppm concentration expressed in parts of material per million parts of air or water; mg/m³ concentration expressed in weight of substance per volume of air; mg/kg quantity of material, by weight, administered to a test subject, based on their body weight in kg. Other measures of toxicity include TDL₀, the lowest dose to cause a symptom and TCL₀ the lowest concentration to cause a symptom; TDo, LDL₀, and LDo, or TC, TCo, LCL₀, and LCo, the lowest dose (or concentration) to cause lethal or toxic effects. Cancer Information: The sources are: IARC - the International Agency for Research on Cancer; NTP - the National Toxicology Program, RTECS - the Registry of Toxic Effects of Chemical Substances, OSHA and CAL/OSHA. IARC and NTP rate chemicals on a scale of decreasing potential to cause human cancer with rankings from 1 to 4. Subrankings (2A, 2B, etc.) are also used. Other Information: BEI - ACGIH Biological Exposure Indices, represent the levels of determinants which are most likely to be observed in specimens collected from a healthy worker who has been exposed to chemicals to the same extent as a worker with inhalation exposure to the TLV.

ECOLOGICAL INFORMATION:
BCF = Bioconcentration Factor, which is used to determine if a substance will concentrate in lifeforms which consume contaminated plant or animal matter; EC is the Effect Concentration in water; ECₜ₀ is the Effect Concentration for 50% of the organisms exposed; NOEC is the No Observed Effect Concentration; MATC is the Maximum Acceptable Toxicant Concentration; NOLC is the No Observed Lethal Concentration; TLₜ₀ = median threshold limit; Coefficient of Oil/Water Distribution is represented by log Kow or log Koc and is used to assess a substance’s behavior in the environment.

REGULATORY INFORMATION:
U.S. and CANADA:
ACGIH: American Conference of Governmental Industrial Hygienists, a professional association which establishes exposure limits. This section explains the impact of various laws and regulations on the material. EPA is the U.S. Environmental Protection Agency; NIOSH is the National Institute of Occupational Safety and Health, which is the research arm of the U.S. Occupational Safety and Health Administration (OSHA). WHMIS is the Canadian Workplace Hazardous Materials Information System. DOT and TC are the U.S. Department of Transportation and the Transport Canada, respectively. Superfund Amendments and Reauthorization Act (SARA); the Canadian Domestic/Non-Domestic Substances List (DSL/NDSL); the U.S. Toxic Substance Control Act (TSCA); Marine Pollutant status according to the DOT; the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA or Superfund); and various state regulations. This section also includes information on the precautionary warnings which appear on the material’s package label. OSHA - U.S. Occupational Safety and Health Administration.
